

## Steps to enable DHCP for Wireless Internet access on the ESCC Enterprise Campus

Click start

Click Run

Open: Type **ncpa.cpl** and click OK

The Network Connections box will open

Right click on the Wireless Network Connection icon then left click on properties

The Wireless Network Connection Properties box will open

Locate the Internet Protocol (TCP/IP) listed in the section under, "This connection uses the following items: ", by scrolling down until you see "Internet Protocol (TCP/IP)" and click on the words in order to highlight it.

Click Properties and the Internet Protocol (TCP/IP) Properties box will open.

**Important** - Write down all of the "use the following IP address:" numbers listed.

IP address

Subnet Mask

Default gateway

Write down "Use the following DNS server addresses"

Preferred DNS server

Alternate DNS server

After you have written down all of the IP address settings, and double checked your numbers for accuracy, you are ready for the next step.

Click on the radio button Obtain an IP address automatically

Click on the radio button Obtain DNS server address automatically

Click OK

Click OK in the Wireless Network Connection Properties box

Click OK to restart Computer
